LoFric

Urotonic™ Surface Technology.

It grabs water and doesn't let go.

When catheterizing, it's important that friction is reduced not only on insertion but also on removal. LoFric is the only intermittent catheter with Urotonic Surface Technology. It actually mimics the urethral environment, allowing it to attract and retain its smooth water surface layer to ensure comfort throughout the entire catheterization. And, it's clinically proven to reduce the risk of long-term complications.¹
